

Term-Clamp™

Key Properties

York's preinstalled Term-Clamp™ allows any type of through wall flashing to be installed just before the outside brick lay up, eliminating damages done by trade hazards and exposure to the elements.

Features & Benefits

- Compatible with all types of through wall flashings, air barriers and sealants
- One way hook design ensures flashing placement and hold
- Made of prestressed UV stable rigid PVC
- Fully integrated mortar key for strength and sealing
- Costs less to install than strip style term bars
- Will not corrode or rot

Yorks **Term-Clamp™** helps your project avoid some of the risks associated with other termination methods, such as:

Risks of tucking the flashing in the backer wall

- Punctures due to falling debris
- Fatigue from wind and the elements
- UV degradation
- Damage from other trades

Risks of using termination bars:

- Sealant failure
- Bowing of the bar due to expansion & contraction or fasteners
- Water infiltration due to improper fastening or sealing

TERM-CLAMP™ APPLICATION
