SAFETY DATA SHEET

1. Identification

Product identifier

WROUGHT ALUMINUM PRODUCTS, 6xxx SERIES ALLOYS

Other means of identification

Recommended use

Various fabricated aluminum parts and products

Recommended Restrictions

Does not include alloys: 6012, 6018, 6042, 6064, 6068, 6084, 6086, 6022 (See SDS Number 390); 6012A, 6020, 6021, 6023, 6028, 6040, 6041, 6262A (See SDS Number 723)

Recommended restrictions

For industrial use only.

Manufacturer/Importer/Supplier/Distributor information

Manufacturer

Alcoa Inc.
201 Isabella Street
Pittsburgh, PA 15212-5858 USA
Health and Safety Tel: 1-412-553-4649
Health and Safety Fax: 1-412-553-4822
Health and Safety Email: accmdsds@alcoa.com

Emergency Information

CHEMTREC: +1-703-527-3887  +1-800-424-9300 (24 Hour Emergency Telephone, multiple languages spoken); ALCOA: +1-412-553-4001 (24 Hour Emergency Telephone, only English spoken)
2. Hazard(s) identification

Classification
This material is hazardous under the criteria of the Federal OSHA Hazard Communication Standard 29CFR 1910.1200.

Potential health effects
The health effects listed below are not likely to occur unless processing of this product generates dusts or fumes. The following statements summarize the health effects generally expected in cases of overexposures. User specific situations should be assessed by a qualified individual. Additional health information can be found in Section 11.

Physical hazards
Not classified.

Health hazards
- Sensitization, skin  Category 1
- Carcinogenicity  Category 2
- Reproductive toxicity  Category 1A

Environmental hazards
Not classified.

Authority defined hazards
Combustible dust

Label elements

Signal word  Danger
Hazard statement  May cause an allergic skin reaction. Suspected of causing cancer. May damage fertility or the unborn child. May form combustible dust concentrations in air.
Precautionary statement
Prevention
- Wear protective gloves/protective clothing/eye protection/face protection. Contaminated work clothing must not be allowed out of the workplace. Do not handle until all safety precautions have been read and understood.
Response
- If exposed or concerned: Get medical advice/attention.
Storage
- Store in a dry place.
Disposal
- Dispose of contents/container in accordance with local/regional/national/international regulations.

Hazard(s) not otherwise classified (HNOC)
None known.

Supplemental information
None.
Specific hazards
Non-combustible as supplied. Small chips, fine turnings, dust, fines or particulate from processing may be readily ignitable.

Explosion/fire hazards may be present when (See Sections 5, 7 and 10 for additional information):
- Dust, fines or particulate are dispersed in air.
- Chips, dust, fines or particulate are in contact with water.
- Dust and fines are in contact with certain metal oxides (e.g., rust, copper oxide).
- Molten metal in contact with water/moisture or certain metal oxides (e.g., rust, copper oxide).

Dust and fume from processing: Irritating to eyes, respiratory system and skin.

3. Composition/information on ingredients

Composition comments
Complete composition is provided below and may include some components classified as non-hazardous.

Mixtures

**Additional Information**

† - Present as impurity. While Lead is not intentionally added to this mixture, it could potentially enter through the recycle stream.

‡ - Present as impurity. While Nickel is not intentionally added to this mixture, it could potentially enter through the recycle stream.

Additional compounds which may be formed during processing are listed in Section 8.

### 4. First-aid measures

**Eye contact**

Dust and fumes from processing: Rinse eyes with plenty of water or saline for at least 15 minutes. Consult a physician.

**Skin contact**

Dust and fume from processing or contact with lubricant/residual oil: Wash with soap and water for at least 15 minutes. Get medical attention if irritation develops or persists.

**Inhalation**

Dust and fumes from processing: Remove to fresh air. Check for clear airway, breathing, and presence of pulse. If breathing is difficult, provide oxygen. Loosen any tight clothing on neck or chest. Provide cardiopulmonary resuscitation for persons without pulse or respirations. Consult a physician.

**Ingestion**

Dust and fumes from processing: Irritating to eyes, respiratory system and skin. Contains nickel. May produce an allergic reaction.

Additional health effects from elevated temperature processing (e.g., welding, melting): Heating above the melting point releases metallic oxides which may cause metal fume fever by inhalation. The symptoms are shivering, fever, malaise and muscular pain.

Contact with residual oil/oil coating: Prolonged or repeated skin contact may cause sensitization and allergic contact dermatitis.

**4. First-aid measures**

**Eye contact**

Dust and fumes from processing: Rinse eyes with plenty of water or saline for at least 15 minutes. Consult a physician.

**Skin contact**

Dust and fume from processing or contact with lubricant/residual oil: Wash with soap and water for at least 15 minutes. Get medical attention if irritation develops or persists.

**Inhalation**

Dust and fumes from processing: Remove to fresh air. Check for clear airway, breathing, and presence of pulse. If breathing is difficult, provide oxygen. Loosen any tight clothing on neck or chest. Provide cardiopulmonary resuscitation for persons without pulse or respirations. Consult a physician.

**Ingestion**

Dust and fumes from processing: Irritating to eyes, respiratory system and skin. Contains nickel. May produce an allergic reaction.

Additional health effects from elevated temperature processing (e.g., welding, melting): Heating above the melting point releases metallic oxides which may cause metal fume fever by inhalation. The symptoms are shivering, fever, malaise and muscular pain.

Contact with residual oil/oil coating: Prolonged or repeated skin contact may cause sensitization and allergic contact dermatitis.

**Medical conditions aggravated by exposure**

Asthma, chronic lung disease, and skin rashes.

**Indication of immediate medical attention and special treatment needed**

Provide general supportive measures and treat symptomatically.

**General information**

Dust and fume from processing: If you feel unwell, seek medical advice (show the label where possible).

### 5. Fire-fighting measures

**Suitable extinguishing media**

Use Class D extinguishing agents on dust, fines, particulate or molten metal.

Use coarse water spray on chips and turnings.

Apply extinguishing media carefully to avoid creating airborne dust, fines or particulate.

**Unsuitable extinguishing media**

DO NOT USE halogenated extinguishing agents on small chips, dust, fines or particulate.

DO NOT USE water in fighting fires around molten metal.

These fire extinguishing agents will react with the burning material.

**Specific hazards arising from the chemical**

May be a potential hazard under the following conditions:

- Dust, fines or particulate clouds may be explosive. Even a minor dust cloud can explode violently. Dust accumulation on the floor, ledges and beams can present a risk of ignition, flame propagation and secondary explosions.
- Chips, dust, fines or particulate in contact with water can generate flammable/explosive hydrogen gas. These gases could present an explosion hazard in confined or poorly ventilated spaces.
- Dust, fines or particulate in contact with certain metal oxides (e.g., rust, copper oxide). A thermite reaction, with considerable heat generation, can be initiated by a weak ignition source.
- Molten metal in contact with water/moisture or certain metal oxides (e.g., rust, copper oxide). Moisture entrapped by molten metal can be explosive. Contact of molten aluminum with certain metal oxides can initiate a thermite reaction. Finely divided metals (e.g., dust, fines or particulate, powders or wire) may have enough surface oxide to produce thermite reactions/explosions. Thermite reactions can also occur with oxides of lead, copper, iron, bismuth and certain other metals.

**Hazardous combustion products**

No hazardous decomposition products are known.
Special protective equipment and precautions for firefighters

Firefighters should wear NIOSH approved, positive pressure, self-contained breathing apparatus and full protective clothing when appropriate.

Fire fighting equipment/instructions

Use gentle surface application of Class D extinguishing agent or dry inert granular material (e.g., sand) to cover and ring the burning material. If impossible to extinguish, protect surroundings and allow fire to burn itself out.

General fire hazards

This product does not present fire or explosion hazards as shipped. Small chips, fine turnings, dust, fines or particulate from processing may be readily ignitable.

Explosion data

| Sensitivity to mechanical impact | Not sensitive. |
| Sensitivity to static discharge   | Product as shipped: Not sensitive. |

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

Avoid generating dust. Avoid contact with sharp edges or heated metal. Molten, heated and cold aluminum look alike; do not touch unless you know it is cold. Use personal protection recommended in Section 8 of the SDS.

For emergency responders

Avoid generating dust. Avoid contact with sharp edges or heated metal. Molten, heated and cold aluminum look alike; do not touch unless you know it is cold. Use personal protection recommended in Section 8 of the SDS.

Evacuation procedures

Keep unnecessary personnel away.

Methods and materials for containment and cleaning up

Collect scrap for recycling. If molten: Use dry sand to contain the flow of material. All tooling (e.g., shovels or hand tools) and containers which come in contact with molten metal must be preheated or specially coated, rust free and approved for such use. Allow the spill to cool before remelting as scrap.

Environmental precautions

No special environmental precautions required.

7. Handling and storage

Handling

Avoid generating dust. Avoid breathing dust/fume. Avoid contact with sharp edges or heated metal. Hot and cold aluminum are not visually different. Hot aluminum does not necessarily glow red. Keep material dry. Use personal protection recommended in Section 8 of the SDS.

Storage

Store in a dry place.

Requirements for Processes Which Generate Dusts or Fines

If processing of this product generates dust, fines or particulate, obtain and follow the safety procedures and equipment guides contained in Aluminum Association Bulletin F-1 and National Fire Protection Association (NFPA) standard listed in Section 16.

Use non-sparking handling equipment, tools and natural bristle brush. Cover and reseal partially empty containers. Provide grounding and bonding where necessary to prevent accumulation of static charges during metal dust handling and transfer operations (See Section 15).

Local ventilation and vacuum systems must be designed to handle combustible/explosive dust, fines or particulate. Dry vacuums and electrostatic precipitators must not be used, unless specifically approved for use with combustible/explosive dusts, fines or particulate and must be dedicated to aluminum dust only and should be clearly labeled as such. Vacuum cleaner hoses must be conductive and nozzles or fitting made of conductive, non-sparking material. Do not co-mingle dust, fines or particulate of aluminum with dust, fines or particulate of steel, iron, iron oxide (rust) or other metal oxides.

Dust collection systems must be dedicated to aluminum dust only and should be clearly labeled as such. Do not co-mingle dust, fines or particulate of aluminum with dust, fines or particulate of steel, iron, iron oxide (rust) or other metal oxides.

Avoid all ignition sources. Good housekeeping practices must be maintained. Do not use compressed air to remove settled material from floors, beams or equipment.

Dust, fines or particulate accumulation on the floor, ledges and beams can present a risk of ignition, flame propagation and secondary explosions. Regularly clean building structures, equipment and machinery to avoid accumulation of dust, fines or particulate that could become airborne.
Molten metal and water can be an explosive combination. The risk is greatest when there is sufficient molten metal to entrap or seal off the water. Water and other forms of contamination on or contained in scrap or remelt ingot are known to have caused explosions in melting operations. While the products may have minimal surface roughness and internal voids, there remains the possibility of moisture contamination or entrapment. If confined, even a few drops of water can lead to violent explosions.

All tooling, containers, molds and ladles which come in contact with molten metal must be preheated or specially coated, rust free and approved for such use. Any surfaces that may contact molten metal (e.g., concrete) should be specially coated.

Drops of molten metal in water (e.g. from plasma arc cutting), while not normally an explosion hazard, can generate enough flammable hydrogen gas to present an explosion hazard. Vigorous circulation of the water and removal of the particles minimize the hazards.

During melting operations, the following minimum guidelines should be observed:

- Inspect all materials prior to furnace charging and completely remove surface contamination such as water, ice, snow, deposits of grease and oil or other surface contamination resulting from weather exposure, shipment, or storage.
- Store materials in dry, heated areas with any cracks or cavities pointed downwards.
- Preheat and dry large items adequately before charging into a furnace containing molten metal. This is typically done by use of a drying oven or homogenizing furnace. The drying cycle should bring the metal temperature of the coldest item of the batch to 400°F (200°C) and then hold at that temperature for 6 hours.

Thermite explosions have been reported when aluminum alloys were melted in furnaces used for alloying with lead, bismuth or other metals with low melting temperatures. These metals, when added as high purity ingots, can seep through cracks in furnace liners and become oxidized. During subsequent melts in the furnace, molten aluminum can contact these metal oxides resulting in a thermite explosion.

**Dross Handling**

Small amounts of beryllium (<0.0002% or <2 ppm) can be present in aluminum alloys either from naturally occurring beryllium in aluminum ore or as an alloying element in the aluminum recycling stream. This beryllium does not present an health hazard during processing (grinding, cutting or welding) of aluminum products. However, beryllium may concentrate in the dross formed when aluminum scrap is remelted. Therefore, the potential for exposures to beryllium when handling dross must be considered. Control of airborne dust levels would be critical in reducing or eliminating this potential. For more information on the hazards associated with handling dross that contains beryllium, refer to Alcoa SDS No. 1013, Aluminum Dross with Low Beryllium. Copies of this SDS are available on www.alcoa.com or by calling +412-553-4649.

8. Exposure controls/personal protection

**Exposure guidelines**

The following constituents are the only constituents of the product which have a PEL, TLV or other recommended exposure limit. At this time, the other constituents have no known exposure limits.

**Occupational exposure limits**

### General

Minimize breathing oil vapors and mist. Remove oil contaminated clothing; launder or dry-clean before reuse. Remove oil contaminated shoes and thoroughly clean and dry before reuse. Cleanse skin thoroughly after contact, before breaks and meals, and at the end of the work period. Oil coating is readily removed from skin with waterless hand cleaners followed by a thorough washing with soap and water.

### Appropriate engineering controls

Fixed vacuum cleaning and dust collection systems used to convey dust, fines or particulate need to discharge to a collection system located outside the building, designed and protected to prevent injury to personnel and damage to nearby equipment and structures.

If dust and fumes are generated through processing: Use with adequate explosion-proof ventilation designed to handle particulates to meet the limits listed in Section 8, Exposure Guidelines.

### Individual protection measures, such as personal protective equipment

**Eye/face protection**

Wear safety glasses with side shields. Wear a face shield when working with molten material.

**Skin protection**

Wear impervious gloves to avoid repeated or prolonged skin contact with residual oils and to avoid any skin injury.

**Hand protection**

Personnel who handle and work with molten metal should utilize primary protective clothing like polycarbonate face shields, fire resistant tapper's jackets, neck shades (snoods), leggings, spats and similar equipment to prevent burn injuries. In addition to primary protection, secondary or day-to-day work clothing that is fire resistant and sheds metal splash is recommended for use with molten metal. Synthetic materials should never be worn even as secondary clothing (undergarments).

Dust, fines or particulate: Wear fire/flame resistant/retardant, non-static clothing.

**Respiratory protection**

Dust and fumes from processing: Use NIOSH-approved respiratory protection as specified by an Industrial Hygienist or other qualified professional if concentrations exceed the limits listed in Section 8. Suggested respiratory protection: N95, N100 for Lead.

**Thermal hazards**

Contact with molten material can cause thermal burns. Hot aluminum does not necessarily glow red. When material is heated, wear gloves to protect against thermal burns. Flame retardant protective clothing is recommended.

**General hygiene considerations**

Wash hands and face before breaks and immediately after handling the product.

**Control parameters**

Follow standard monitoring procedures. Sampling to establish lead level exposure is advised where exposure to airborne particulate or fumes is possible. Consult OSHA Lead Standard 29 CFR 1910.1025 for specific health/industrial hygiene precautions and requirements to follow when handling lead compounds.

**Environmental exposure controls**

No special environmental precautions required.
9. Physical and chemical properties

Form
Solid.

Color
Silver colored.

Odor
Odorless

Odor threshold
Not applicable.

pH
Not applicable.

Density
2.69 - 2.74 g/cm³

Melting point/freezing point
1029.92 - 1209.92 °F (554.4 - 654.4 °C) / Melting point

Initial boiling point and boiling range
Not determined

Flash point
Not applicable

Evaporation rate
Not applicable

Flammability (solid, gas)
Not applicable.

Upper/lower flammability or explosive limits

Flammability limit - upper (%)
Not applicable

Flammability limit - lower (%)
Not applicable

Explosive properties
Dust clouds may be explosive under certain conditions.

Dust explosion properties
St class
Very strong explosion.

Vapor pressure
Not applicable.

Vapor density
Not applicable.

Relative density
Not determined

Solubility(ies)
Insoluble

Specific gravity
Not applicable

Partition coefficient
Not applicable.
(n-octanol/water)
Not applicable

Auto-ignition temperature
Not applicable

Decomposition temperature
Not applicable

Viscosity
Not applicable

10. Stability and reactivity

Reactivity
The product is stable and non-reactive under normal conditions of use, storage and transport.

Chemical stability
Stable under normal conditions of use, storage, and transportation as shipped.

Possibility of hazardous reactions
Hazardous polymerization does not occur.
Grinding, sanding, buffing and polishing operations may generate potentially explosive aluminum dust, fines or particulate that must not be co-mingled with dust, fines or particulate of steel, iron, iron oxide (rust) or other metal oxides. Vacuum and dust collection systems utilized for processing aluminum must be placarded as follows:

**WARNING – Aluminum Metal Only – Fire or Explosion Can Result with Other Metals.**

Chips, dust, fines or particulate, and molten metal are considerably more reactive with the following:

- **Heat:** Oxidizes at a rate dependent upon temperature and particle size.
- **Water:** Slowly generates flammable/explosive hydrogen gas and heat. Generation rate is greatly increased with smaller particles (e.g., fines and dusts). Molten metal can react violently/explosively with water or moisture, particularly when the water is entrapped.

Explosions can occur with coils of foil that have been submerged or partially submerged in water for an extended period of time. Water can penetrate between the layers of foil, react with the aluminum surface and generate heat and hydrogen gas. When the coils are removed from the cooling effects of the water, rapid temperature increases can occur causing steam explosions which result in the rupture of the coils and discharge of debris.

Coils of foil may be a potential hazard under the following conditions:

- Coil has been annealed (annealing removes residual oil that could prevent penetration of water)
- Foil is very thin gauge (5-9 µm thickness which increases surface area)
- Coil has been immersed for an extended period of time (several hours or more)
- Wetted coil has recently been removed from the cooling effects of the water

In such situations, the coils should be isolated (30 meters from any personnel) for at least 72 hours as soon as possible after removal from the water. Coils making crackling sounds or emitting steam should not be approached or transported in commerce. Wetted coils should not be charged into a furnace for remelting until completely dry.

Incompatible materials

Chips, dust, fines or particulate, and molten metal are considerably more reactive with the following:

- **Strong oxidizers:** Violent reaction with considerable heat generation. Can react explosively with nitrates (e.g., ammonium nitrate and fertilizers containing nitrate) when heated or molten.
- **Acids and alkalis:** Reacts to generate flammable/explosive hydrogen gas. Generation rate is greatly increased with smaller particles (e.g., dust, fines or particulate).
- **Halogenated compounds:** Many halogenated hydrocarbons, including halogenated fire extinguishing agents, can react violently with chips, dust, fines or particulate, or molten aluminum.
- **Iron oxide (rust) and other metal oxides (e.g., copper and lead oxides):** A violent thermite reaction generating considerable heat can occur. Reaction with aluminum fines and dusts requires only very weak ignition sources for initiation. Molten aluminum can react violently with iron oxide without external ignition source.
- **Iron powder and water:** Explosive reaction forming hydrogen gas when heated above 1470°F (800°C).

Thermite explosions have been reported when aluminum alloys were melted in furnaces used for alloying with lead, bismuth or other metals with low melting temperatures. These metals, when added as high purity ingots, can seep through cracks in furnace liners and become oxidized. During subsequent melts in the furnace, molten aluminum can contact these metal oxides resulting in a thermite explosion.

Hazardous decomposition products

No hazardous decomposition products are known.
11. Toxicological information

Health effects associated with ingredients

Aluminum dust/fines and fumes: Low health risk by inhalation. Generally considered to be biologically inert (milling, cutting, grinding).

Silicon (inert dusts): Chronic overexposures: Can cause chronic bronchitis and narrowing of airways.

Copper dust/mists: Can cause irritation of the eyes, mucous membranes, skin, and respiratory tract. Chronic overexposures: Can cause reduction in the number of red blood cells (anemia), skin abnormalities (pigmentation changes) and hair discoloration.

Nickel dust and fume: Can cause irritation of eyes, skin and respiratory tract. Eye contact: Can cause inflammation of the eyes and eyelids (conjunctivitis). Skin contact: Can cause sensitization and allergic contact dermatitis. Chronic overexposures: Can cause perforation of the nasal septum, inflammation of the nasal passages (sinusitis), respiratory sensitization, asthma and scarring of the lungs (pulmonary fibrosis). Nickel alloys IARC/NTP: Reviewed and not recommended for listing by NTP. Listed as possibly carcinogenic to humans by IARC (Group 2B).

Chromium dust and fumes: Can cause irritation of eye, skin and respiratory tract. Metallic chromium and trivalent chromium: Not classifiable as to their carcinogenicity to humans by IARC.

Lead dust or fume: Can cause irritation of eyes and upper respiratory tract. Acute overexposures: Can cause nausea and muscle cramps. Chronic overexposures: Can cause weakness in the extremities (peripheral neuropathy), abdominal cramps, gastrointestinal tract effects, kidney damage, central nervous system damage, damage to the blood forming organs, blood cell damage and reproductive harm. Can cause reduced fertility and fetal toxicity in pregnant women. IARC/NTP: Listed as "reasonably anticipated to be a human carcinogen" by the NTP. Listed as possibly carcinogenic to humans by IARC (Group 2B).

Some products are supplied with an oil coating or have residual oil from the manufacturing process. Oil: Can cause irritation of skin. Skin contact (prolonged or repeated): Can cause dermatitis.

Health effects associated with compounds formed during processing

The following could be expected if welded, remelted or otherwise processed at elevated temperatures:

Alumina (aluminum oxide): Low health risk by inhalation. Generally considered to be biologically inert.

Silica, amorphous: Acute overexposures: Can cause dryness of eyes, nose and upper respiratory tract.

Manganese oxide fumes: Can cause irritation of the eyes, skin, and respiratory tract. Acute overexposures: Can cause metal fume fever (nausea, fever, chills, shortness of breath and malaise).

Copper fume: Can cause irritation of the eyes, mucous membranes, and respiratory tract. Acute overexposures: Can cause metal fume fever (nausea, fever, chills, shortness of breath and malaise).

Iron oxide: Chronic overexposures: Can cause benign lung disease (siderosis). Ingestion: Can cause irritation of gastrointestinal tract, bleeding, changes in the pH of the body fluids (metabolic acidosis) and liver damage.

Zinc oxide fumes: Can cause irritation of upper respiratory tract. Acute overexposures: Can cause metal fume fever (nausea, fever, chills, shortness of breath and malaise).
Hexavalent chromium compounds (chromium VI): Can cause irritation of eye, skin and respiratory tract. Skin contact: Can cause irritant dermatitis, allergic reactions and skin ulcers. Chronic overexposures: Can cause perforation of the nasal septum, respiratory sensitization, asthma, the accumulation of fluid in the lungs (pulmonary edema), lung damage, kidney damage, lung cancer, nasal cancer and cancer of the gastrointestinal tract. IARC/NTP: Listed as "known to be a human carcinogen" by the NTP. Listed as carcinogenic to humans by IARC (Group 1).

Chromium (III) compounds: Can cause irritation of eye, skin and respiratory tract. IARC/NTP: Not classifiable as to their carcinogenicity to humans by IARC.

Nickel compounds: Associated with lung cancer, cancer of the vocal cords and nasal cancer. IARC/NTP: Listed as "known to be a human carcinogen" by the NTP. Listed as carcinogenic to humans by IARC (Group 1).

Lead (inorganic compounds): IARC/NTP: Listed as reasonably anticipated to be a human carcinogen" by the NTP. Listed as probably carcinogenic to humans by IARC (Group 2A).

If the product is heated well above ambient temperatures or machined, oil vapor or mist may be generated.

Oil vapor or mist: Can cause irritation of respiratory tract. Acute overexposures: Can cause bronchitis, headache, central nervous system effects (nausea, dizziness and loss of coordination) and drowsiness (narcosis).

Welding, plasma arc cutting, and arc spray metalizing can generate ozone.

Ozone: Can cause irritation of eyes, nose and upper respiratory tract. Acute overexposures: Can cause shortness of breath, tightness of chest, headache, cough, nausea and narrowing of airways. Effects are reversible on cessation of exposure. Acute overexposures (high concentrations): Can cause respiratory distress, respiratory tract damage, bleeding and the accumulation of fluid in the lungs (pulmonary edema). Effects can be delayed up to 1-2 hours. Additional information: Studies (inhalation) with experimental animals have found genetic damage, reproductive harm, blood cell damage, lung damage and death.

Welding fumes: IARC/NTP: Listed as possibly carcinogenic to humans by IARC (Group 2B). Additional information: In one study, occupational asthma was associated with exposures to fumes from aluminum welding.

Plasma arc cutting of aluminum can generate oxides of nitrogen.

Oxides of nitrogen (NO and NO2): Can cause irritation of eyes, skin and respiratory tract. Acute overexposures: Can cause reduced ability of the blood to carry oxygen (methemoglobin). Can cause cough, shortness of breath, accumulation of fluid in the lungs (pulmonary edema) and death. Effects can be delayed up to 2-3 weeks.

Nitrogen dioxide (NO2): Chronic overexposures: Can cause scarring of the lungs (pulmonary fibrosis).

Information on likely routes of exposure

Eye contact
Dust and fumes from processing: Can cause irritation.

Skin contact
Contact with residual oil/oil coating: Can cause irritation. Prolonged or repeated skin contact may cause dermatitis.
Dust and fumes from processing: Can cause irritation.
Contains (Nickel). May produce an allergic reaction.

Inhalation
Dust: Can cause irritation of the upper respiratory tract. Chronic exposure: Can cause reduction in the number of red blood cells (anemia), skin abnormalities (pigmentation changes), central nervous system damage, secondary Parkinson's disease and reproductive harm.
Additional health effects from elevated temperature processing (e.g., welding, melting): Dust and fumes: Can cause irritation of the respiratory tract. Acute exposure: Can cause metal fume fever (nausea, chills, fever, shortness of breath and malaise) reduced ability of the blood to carry oxygen (methemoglobin) and the accumulation of fluid in the lungs (pulmonary edema). Chronic exposure: Can cause respiratory sensitization and lung disease.

Ingestion
Not likely, due to the form of the product.

Symptoms related to the physical, chemical and toxicological characteristics
Dust and fumes from processing: Product dust may be irritating to eyes, skin and respiratory system.
Contains nickel, which can cause lung or nasal cancer. Long-term breathing of this material may cause chronic lung disease.
May cause allergic respiratory and skin reactions. May cause sensitization by inhalation and skin contact.
Chronic exposure to breathing low levels of manganese dust or fume over a long period of time can result in “manganism,” a disease of the central nervous system similar to Parkinson’s Disease, gait impairment, muscle spasms and behavioral changes.
Lead may damage kidney function, the blood forming system and the reproductive system.
Additional health effects from elevated temperature processing (e.g., if heated to decomposition): Heating above the melting point releases metallic oxides which may cause metal fume fever by inhalation. The symptoms are shivering, fever, malaise and muscular pain.
Contact with residual oil/oil coating: Prolonged skin contact may cause skin irritation and/or dermatitis.

**Acute toxicity**
Not classified. Based on available data, the classification criteria are not met.

**Skin corrosion/irritation**
Non-corrosive.

**Serious eye damage/eye irritation**
Dust and fume from processing: Can cause mechanical irritation.

**Respiratory or skin sensitization**
Product as shipped: May cause sensitization by inhalation. Based on available data, the classification criteria are not met.

**Respiratory sensitization**
Dust and fumes from processing: Contains nickel. May produce an allergic reaction.

**Skin sensitization**
Dust and fume from processing: Direct contact may irritate. Contains nickel. May produce an allergic reaction. Contact with residual oil/oil coating: Prolonged or repeated exposure may cause: Mild dermatitis, allergic skin rash.

**Germ cell mutagenicity**
Classification not possible. Due to lack of data the classification is not possible.

**Pre-existing conditions aggravated by exposure**
Asthma, chronic lung disease, Secondary Parkinson’s disease and skin rashes.

**Carcinogenicity**
Product as shipped: Does not present any cancer hazards. Dust from mechanical processing: Can present a cancer hazard (Nickel, Lead).

**Dust and fumes from welding or elevated temperature processing:** Can present a cancer hazard (Hexavalent chromium compounds, Nickel compounds, Lead compounds, Welding fumes).

**ACGIH Carcinogens**
- Aluminum (CAS 7429-90-5) Not classifiable as a human carcinogen. A4
- Chromium (CAS 7440-47-3) Not classifiable as a human carcinogen. A4
- Lead† (CAS 7439-92-1) A3 Confirmed animal carcinogen with unknown relevance to humans.
- Nickel‡ (CAS 7440-02-0) Not suspected as a human carcinogen. A5
- Oil mist, mineral (CAS 8012-95-1) A2 Suspected human carcinogen.
- Not classifiable as a human carcinogen. A4

**IARC Monographs. Overall Evaluation of Carcinogenicity**
- Chromium (CAS 7440-47-3) 3 Not classifiable as to carcinogenicity to humans.
- Lead† (CAS 7439-92-1) 2B Possibly carcinogenic to humans.
- Nickel‡ (CAS 7440-02-0) 1 Carcinogenic to humans.

**US. National Toxicology Program (NTP) Report on Carcinogens**
- Lead† (CAS 7439-92-1) Reasonably Anticipated to be a Human Carcinogen.
- Nickel‡ (CAS 7440-02-0) Known To Be Human Carcinogen.
- Oil mist, mineral (CAS 8012-95-1) Known To Be Human Carcinogen.
Product as shipped: Does not present any reproductive hazards.

Dust from mechanical processing: Can present a reproductive hazard (Lead).

Additional health effects from elevated temperature processing (e.g., welding, melting): Dust and fume from processing: Can present a reproductive hazard (Lead compounds, Manganese compounds).

Routes of exposure
Eye contact. Skin contact. Inhalation.

Specific target organ toxicity - single exposure
Not classified. Based on available data, the classification criteria are not met.

Specific target organ toxicity - repeated exposure
Dust and fume from processing: Causes damage to organs through prolonged or repeated exposure by inhalation.

Aspiration hazard
Not applicable.

Chronic effects
Dust and fumes from processing: Chronic overexposures: Contains nickel, which can cause lung or nasal cancer. Long-term breathing of this material may cause chronic lung disease. Risk of sensitization or allergic reactions among sensitive individuals. Lead may damage kidney function, the blood forming system and the reproductive system. Lead is accumulated in the body and may cause damage to the brain and nervous system after prolonged exposure.

Further information
None known.

12. Ecological information
This material is not expected to be harmful to aquatic life.

* Estimates for product may be based on additional component data not shown.
Persistence and degradability
The product contains inorganic compounds which are not biodegradable.

Bioaccumulative potential
The product is not bioaccumulating.

Mobility in soil
Not considered mobile.

Mobility in general
Not considered mobile.

Other adverse effects
None known.

13. Disposal considerations

Disposal instructions
Reuse or recycle material whenever possible. If reuse or recycling is not possible, disposal must be made according to local or governmental regulations.

Waste codes
RCRA Status: Must be determined at the point of waste generation. If material is disposed as a waste, it must be characterized under RCRA according to 40 CFR, Part 261, or state equivalent in the U.S.

TCLP testing is recommended for Chromium and Lead in a waste disposal scenario. D007: Waste Chromium
D008: Waste Lead

Waste from residues / unused products
Dispose of in accordance with local regulations.

Contaminated packaging
Dispose of in accordance with local regulations.

14. Transport information

General Shipping Information

Basic Shipping Information
- ID number
- Proper shipping name: Not regulated
- Hazard class
- Packing group

General Shipping Notes
- When "Not regulated", enter the proper freight classification, SDS Number and Product Name onto the shipping paperwork.

Disclaimer
This section provides basic classification information and, where relevant, information with respect to specific modal regulations, environmental hazards and special precautions. Otherwise, it is presumed that the information is not available/not relevant.

15. Regulatory information

US federal regulations
In reference to Title VI of the Clean Air Act of 1990, this material does not contain nor was it manufactured using ozone-depleting chemicals.

All electrical equipment must be suitable for use in hazardous atmospheres involving aluminum powder in accordance with 29 CFR 1910.307. The National Electrical Code, NFPA 70, contains guidelines for determining the type and design of equipment and installation which will meet this requirement.

TSCA Section 12(b) Export Notification (40 CFR 707, Subpt. D)
Not regulated.

CERCLA Hazardous Substance List (40 CFR 302.4)
- Chromium (CAS 7440-47-3)

Material name: WROUGHT ALUMINUM PRODUCTS, 6xxx SERIES ALLOYS

*** End of SDS ***
WROUGHT ALUMINUM PRODUCTS, 6xxx SERIES ALLOYS

Hazard statement
May cause an allergic skin reaction. Suspected of causing cancer. May damage fertility or the unborn child. May form combustible dust concentrations in air.

Precautionary statement
Prevention
Wear protective gloves/protective clothing/eye protection/face protection. Contaminated work clothing must not be allowed out of the workplace. Do not handle until all safety precautions have been read and understood.

Response
If exposed or concerned: Get medical advice/attention.

Storage
Store in a dry place.

Disposal
Dispose of contents/container in accordance with local/regional/national/international regulations.

Supplemental information
May form combustible dust concentrations in air.

Contains nickel. May produce an allergic reaction.

This product does not present fire or explosion hazards as shipped. Small chips, fine turnings, dust, fines or particulate from processing may be readily ignitable.

Explosion/fire hazards may be present when:
• Dust or fines are dispersed in air.
• Chips, dust or fines are in contact with water.
• Dust and fines from processing are in contact with certain metal oxides (e.g., rust, copper oxide).
• Molten metal in contact with water/moisture or certain metal oxides (e.g., rust, copper oxide).

Contact with residual oil/oil coating: Can cause irritation. Prolonged or repeated skin contact may cause dermatitis.

FIRE FIGHTING MEASURES: Use Class D extinguishing agents on fines, dust or molten metal. Use coarse water spray on chips and turnings. DO NOT USE water in fighting fires around molten metal. DO NOT USE halogenated extinguishing agents on small chips/fines. These fire extinguishing agents will react with the burning material.

IN CASE OF SPILL: Avoid dust formation. Collect scrap for recycling. If molten: Use dry sand to contain the flow of material. All tooling (e.g., shovels or hand tools) and containers which come in contact with molten metal must be preheated or specially coated, rust free and approved for such use. Allow the spill to cool before remelting as scrap.

See Alcoa SDS Number 0668.
