Section 1. Identification

Product name: ALUMINUM WROUGHT METAL, 6XXX SERIES ALLOYS
Product code: 290
Other means of identification: 6XXX series, 6XXXX, Aluminum wrought metal
Product type: Massive metal.

Relevant identified uses of the substance or mixture and uses advised against
Material uses: Industrial applications: Primary metal; casting/molten and alloying; processing and manufacturing into articles and semi-fabricated articles, building and construction products, packaging products.

Supplier's details: Rio Tinto Aluminium
400-1190 Avenue des Canadiens-de-Montréal
Montreal, Quebec H3B 0E3
Canada
Telephone: +1 514 848 8000

e-mail address of person responsible for this SDS: rta.msds@riotinto.com

Emergency telephone number: +1 215 207 0061 (Rio Tinto Aluminium)
For advice on chemical emergencies, spillages, fires or first aid.

Section 2. Hazards identification

OSHA/HCS status: While this material is not considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200), this SDS contains valuable information critical to the safe handling and proper use of the product. This SDS should be retained and available for employees and other users of this product.

Classification of the substance or mixture: Not classified.

GHS label elements
Signal word: No signal word.
Hazard statements: No known significant effects or critical hazards.
Precautionary statements
Prevention: Not applicable.
Response: Not applicable.
Storage: Not applicable.
Disposal: Not applicable.
Hazard not otherwise classified: None known.

Date of issue/Date of revision: 04/04/2016
Version: 1
Section 3. Composition/information on ingredients

Substance/mixture : Mixture

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact : Get medical attention if any damage to the eye is caused by the metal.
Inhalation : For dust exposure: If irritation or other pulmonary symptoms persist, seek medical attention.
Skin contact : Get medical attention if symptoms occur. Cuts should be treated promptly and covered. Heated material can cause thermal burns. In case of burns, immediately cool affected skin with cold water and continue for as long as possible or apply wet cloths to the area until medical attention can be obtained.
Ingestion : Not applicable.

Most important symptoms/effects, acute and delayed

Potential acute health effects

Eye contact : Not applicable.
Inhalation : Not applicable.
Skin contact : No known significant effects or critical hazards.
Ingestion : Not applicable.

Over-exposure signs/symptoms

Eye contact : No specific data.
Inhalation : No specific data.
Skin contact : No specific data.
Ingestion : No specific data.

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician : Treat symptomatically.
Specific treatments : No specific treatment.
Protection of first-aiders : No special protection is required. See Section 8 for information on appropriate personal protective equipment.

See toxicological information (Section 11)
Section 5. Fire-fighting measures

**Extinguishing media**

**Suitable extinguishing media**

Use an extinguishing agent suitable for the surrounding fire. Not a fire hazard unless in a particle form (small chips, fine turnings, dust). Suspensions of aluminum dust in air may pose a severe explosion hazard, especially in a confined atmosphere. Avoid sparks and prevent electrostatic discharges from accumulating. A potential for explosion exists for a mixture of fine coarse particles if at least 15% to 20% of the material is finer than 44 microns (325 mesh). Buffing and polishing generate finer material than grinding, sawing and cutting. In case of aluminum fires, use a class D dry powder extinguisher.

**Unsuitable extinguishing media**

Water, foam, halogenated extinguishing agents.

**Specific hazards arising from the chemical**

No specific fire or explosion hazard.

**Hazardous thermal decomposition products**

None.

**Special protective actions for fire-fighters**

Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Aluminium may lose structural strength when subject to fire and will melt to a hazardous liquid at temperatures in the range of 480 – 660 degrees celsius (dependent on the alloy composition).

**Special protective equipment for fire-fighters**

No special protection is required.

**Remark**

Molten aluminium may explode on contact with water or moisture, and may react violently with rust, certain metal oxides and nitrates.

Section 6. Accidental release measures

**Personal precautions, protective equipment and emergency procedures**

**For non-emergency personnel**

No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Put on appropriate personal protective equipment.

**For emergency responders**

If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".

**Environmental precautions**

No specific hazard.

**Methods and materials for containment and cleaning up**

**Small spill**

Take care with items that are sharp or heavy. Recycle, if possible.

**Large spill**

Take care with items that are sharp or heavy. Note: see Section 1 for emergency contact information and Section 13 for waste disposal. Recycle, if possible. Do not attempt to arrest the flow of molten aluminium with shovels, hand tools or footwear. Contain spill with dry sand. Let solidify and cool down to ambient air temperature.

Section 7. Handling and storage

**Precautions for safe handling**

**Protective measures**

Put on appropriate personal protective equipment (see Section 8). Take care with items that are sharp or heavy. Because of the risk of explosion, aluminum ingots and metal scrap should be thoroughly dried before remelting. Use standard techniques to check metal temperature before handling. Hot aluminum does not present any warning color change. Exercise great caution, since the metal may be hot. For more information on the handling and storing of aluminum, consult the following documents published by the Aluminum Association, 1525 Wilson Blvd, Suite 600, Arlington, VA 22209 (www.aluminum.org):

- Guidelines for handling molten aluminum.
- Recommendations for storage and handling of aluminum powders and pastes.
Section 7. Handling and storage

- Guidelines for handling aluminum fines generated during various aluminum fabricating operations.
  See also "National Fire Protection Association Codes": NFPA 484: Standard for Combustible Materials.

Inspect all remelt ingot prior to charging into a furnace and remove surface contamination such as water, ice, snow, deposits of grease and oil and other surface contamination resulting from transport or storage.

Adequately preheat and dry ingot before charging it into a furnace. As a guide, this is done by heating the ingots to 400 degrees Celsius throughout. Heating for 2 hours per 25mm of section thickness is typically required to bring aluminium to a uniform temperature.

Perform the furnace charging sequence in such a way that full submersion of ingots in molten aluminium is avoided to prevent entrapment of moisture beneath molten metal.

Advice on general occupational hygiene:
Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities:
Store in accordance with local regulations. Do not cut, transport or even approach any coil giving off a crackling sound or emitting steam vapour. Once a coil of foil has been partially or completely wetted: KEEP THE COIL COOL UNTIL THE INTERIOR IS COMPLETELY DRY. If such cooling is impractical, leave the coil in place and keep people at least 30 metres away from it for at least 72 hours. (See Rio Tinto Alcan publication entitled "Potential Safety Hazards of immersing a coil of Aluminum Foil in water"). Product ready for remelting must be kept dry.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

### Appropriate engineering controls
- If the product is in its solid form: No special ventilation requirements. Special ventilation should be used to convey finely divided metallic dust generated by grinding, sawing or polishing operations, in order to eliminate explosion hazards. Maintain dust concentration in ventilation ducts below the lower explosive limit of 40 g/m³ (0.04 oz/ft³).

### Environmental exposure controls
- Not applicable.

### Individual protection measures

#### Hygiene measures
- Wash thoroughly after handling.

#### Eye/face protection
- Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: safety glasses with side-shields. Recommended: face shield.

#### Skin protection

##### Hand protection
- Use strong, cut-resistant gloves suitable for handling metals.

##### Body protection
- Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. Recommended: For handling molten metal: Clothing must be resistant to drops of molten metal and radiant heat.

##### Other skin protection
- Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product. Recommended: For handling molten metal: Safety boots or shoes with spats.

##### Respiratory protection
- Not applicable. Recommended: If workers are exposed to concentrations above the exposure limit, they must use appropriate, certified respirators.

**Section 10. Stability and reactivity**

**Reactivity**

No specific test data related to reactivity available for this product or its ingredients.

**Chemical stability**

The product is stable.

**Possibility of hazardous reactions**

Under normal conditions of storage and use, hazardous reactions will not occur.

**Conditions to avoid**

No specific data.

**Incompatible materials**

In the form of particles, may explode when mixed with halogenated acids, halogenated solvents, bromates, iodates or ammonium nitrate. Aluminum particles on contact with copper, lead, or iron oxides can react vigorously with release of heat if there is a source of ignition or intense heat. Molten aluminium may react violently if it comes into contact with water.

**Hazardous decomposition products**

Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Conclusion/Summary: No known significant effects or critical hazards.

Irritation/Corrosion

Eyes: Not applicable for solid metal form. Aluminum dust may cause eye discomfort and irritation.

Sensitization

Skin: Non-sensitizer.

Respiratory: Non-sensitizer.

Mutagenicity

Conclusion/Summary: No mutagenic effect.

Carcinogenicity

Conclusion/Summary: No carcinogenic effect.

Reproductive toxicity

Conclusion/Summary: Not considered to be toxic to the reproductive system.

Teratogenicity

Conclusion/Summary: No teratogenic effect.

Specific target organ toxicity (single exposure)

Not available.

Specific target organ toxicity (repeated exposure)

Not available.

Aspiration hazard

Not available.

Information on the likely routes of exposure

Routes of entry anticipated: Inhalation.

Potential acute health effects

Eye contact: Not applicable.

Inhalation: Not applicable.

Skin contact: No known significant effects or critical hazards.

Ingestion: Not applicable.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact: No specific data.

Inhalation: No specific data.

Skin contact: No specific data.

Ingestion: No specific data.

Delayed and immediate effects and also chronic effects from short and long term exposure
Section 11. Toxicological information

**Short term exposure**
- **Potential immediate effects**: No specific data.
- **Potential delayed effects**: No specific data.

**Long term exposure**
- **Potential immediate effects**: No specific data.
- **Potential delayed effects**: No specific data.

**Potential chronic health effects**

**Conclusion/Summary**: No acute or chronic classification is appropriate for Al metal massive based on non toxic results below the Ecotoxicity Reference Value (ERV) of tests with aluminium metal, oxide and hydroxide at loadings of 100 mg/L at pH 8-8.5 (maximum solubility of Al expected). All aluminium in soil or the aquatic environment comes from natural sources. Local sources has an insignificant contribution and impact on environment.

**Persistence and degradability**

Section 12. Ecological information

Bioaccumulative potential
Not available.

Mobility in soil

Soil/water partition coefficient ($K_{oc}$)
Not available.

Mobility
Not mobile under normal environmental conditions. May be leached from the ground at low pH (<5.5) or high pH (>8.5).

Other adverse effects
No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods
The generation of waste should be avoided or minimized wherever possible. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Recycle, if possible.
